Understanding developmental stages can help you support your child’s learning at home and in school.

All children go through developmental stages as they grow up. Just as children’s height, weight, and physical abilities change, so do things such as their desire to play alone or with a group, how they learn best, or how talkative they are.

These stages of development are fairly predictable in children within any given culture. With each stage come certain predictable changes in how children relate to others and approach the world.

Children go through these stages at different rates. Although there are general characteristics at each developmental stage in any given culture, how quickly a child goes through these stages depends on many things, including the child’s personality and environment. It’s common and normal for some children to arrive at a developmental stage a bit later or earlier—sometimes a year later or earlier—than their peers. Also, a child might mature quickly in one area, such as physical development, but more slowly in another, such as social development.

Children don’t change suddenly on their birthday. For example, a child who just turned six may still show a lot of five-year-old behaviors, and a child who’s six-and-a-half may already be showing a lot of seven-year-old behaviors.

ENJOY YOUR CHILD AT EACH AGE.

Each age is unique. Each is a wonder.

*The characteristics in this pamphlet are based on research on children in European and U.S. schools. Children growing up in other cultures may show different developmental patterns.

COMMON CHARACTERISTICS OF Five-Year-Olds

Five, overall, is a time of great happiness. Life is “good,” says the five-year-old. Five is also a time of great change. During this one year, children may go from being cautious and compliant to uncertain and oppositional.

SOCIAL
- Early in the year, like to help, follow rules, and be “good”
- Later, may test or oppose adult authority or show uncertainty (not sure whether to be “good” or “naughty”)
- Need consistent rules and enforcement; respond well to clear and simple expectations
- Need empathetic discipline as they test limits and make mistakes

COGNITIVE
- See only one way to do things; rarely see other viewpoints
- Imaginative and believe toys and other objects are alive
- Think very literally (“raining cats and dogs” means cats and dogs are falling from the sky)
- Often reverse letters and numbers
- Early in the year, like to copy and repeat activities; later, like to try more new activities
- Often think out loud before acting (“I’m going to move the truck”)
- Learn best by exploring materials such as blocks, clay, finger paints, rocks, and shells

PHYSICAL
- Better control of running, jumping, and other large movements
- Need lots of physical activity, including free play
- Still awkward with writing, handicrafts, and other small movements
- Early in the year, pace themselves well; later, tire quickly
- Pencil grip changes from three-fingered to other grips
- Able to see close objects best; not yet able to sweep focus smoothly from left to right
- Read one word at a time
- Copying from blackboard is hard

COMMON CHARACTERISTICS OF Six-Year-Olds

The bodies, minds, and social behavior of six-year-olds are changing dramatically. Sixes have lots of energy. Eagerness, curiosity, imagination, drive, openness, and enthusiasm—all are at their peak in the typical six-year-old.

SOCIAL
- Beginning to understand past and present, and how and why things happen
- More able to see other viewpoints and understand reasons for rules
- Love new ideas and asking questions
- Learn well through games, poems, riddles, and songs

COGNITIVE
- Competitive; not always good sports; sometimes bossy or critical
- Either rush to be first or dawdle to be last
- Want to have friends; may have best friends
- Enjoy dressing up, putting on plays, etc., with other children
- TALKATIVE and noisy
- Easily upset when criticized or discouraged
- Love encouragement, support, and treats
- May test authority with tantrums, complaining, or whining
- Might test authority with tattling, or by getting others in trouble
- Like number lots of work, not what is learned with the quality of the work
- Listen well and speak precisely

PHYSICAL
- Eyes are maturing, so reading is easier, but blackboard copying is still hard
- Often chew pencils, their own fingernails (may be due to the discomfort of new teeth growing in)
- Bodies growing rapidly
- Like lots of physical activity
- Tire easily and get sick often

COMMON CHARACTERISTICS OF Seven-Year-Olds

In contrast to brash, noisy sixes, seven-year-olds are generally quiet, sensitive, and serious. Their intense moods often change quickly. Sevens tend to work hard at everything they do and need private time to manage their new thoughts and feelings.

SOCIAL
- May be moody, shy, sulky, touchy; sometimes depressed
- Prefer playing and working alone or with one friend
- May change friendships quickly and feel “nobody likes me”
- Rely on adults for help and reassurance
- Need the security of rules, routines, and physical boundaries

COGNITIVE
- Better at understanding ideas such as time, space, and quantity
- Learn new words and meanings quickly; enjoy writing stories
- Open to learning math
- Good at classifying, such as sorting buttons, pictures, leaves, and shapes
- Listen well and speak precisely

PHYSICAL
- Open-ended exploration of how things work
- Bothered by mistakes and try hard to make their work perfect
- Like to work slowly and finish what they start
- Enjoy repeating tasks and review learning

PHYSICAL
- With head on arm or desk, grasp pencil point tightly
- With head on arm or desk, eyes focused on a small, close area
- Copying from board is very hard
- Can do quiet work for longer periods
- Can get sick from worrying about tests, assignments, etc.
